

TEAM VoWLAN Integrated Voice and Data Solution

Motorola's TEAM VoWLAN (Voice over Wireless LAN) is the complete pocketable mobile office for workers inside the enterprise. Some of the most mobile employees never leave the office. TEAM VoWLAN is an integrated mobile voice and data solution that turns the desk phone and desktop into a pocketable virtual office. Workers can keep in full communication, wherever they happen to be in the enterprise. TEAM VoWLAN is part of a comprehensive portfolio of communication solutions designed to meet the needs of all work groups, from the corner office to the shop floor, loading dock and on the road. The product portfolio includes:

- **TEAM VoWLAN** - This single mode solution is designed to provide mobile users anywhere in the enterprise campus with mobile access to the voice and data services
- **TEAM Express** - This downloadable voice client creates Push-to-Talk communication capability with a quick, easy to deploy path to interoperability. TEAM Express solution leverages existing WLAN infrastructure and requires no servers or PBX integration.

In addition, the TEAM Solution has been designed for future capabilities:

- **TEAM VoWLAN Common Voice Client (CVC)** - Extend the TEAM VoWLAN solution to additional voice capable devices, such as handheld mobile computers and bar code scanners, ensuring that workers have the right device to meet their mobility needs.
- **TEAM Fixed Mobile Convergence (FMC)** (Dual Mode: VoWLAN and Cellular) - This solution will deliver mobile access to voice and data services within the enterprise over the WLAN, seamlessly extending those capabilities to the wide area cellular network when the user moves outside the enterprise campus.

EWP1000 and EWP2000: Enterprise Grade Business Smartphones

Featuring the EWP1000 and EWP2000 series of devices, the TEAM solution provides enterprise users with a single device to meet all their communication needs. The EWP1000 professional Business Smartphone series is designed to handle all day use, including drops and bumps. The EWP2000 semi-rugged Business Smartphone series is designed for more demanding environments, and is moisture and dust sealed as well as having a more rigorous drop specification. All handset models support these key communications requirements:

- **PBX telephony:** Interoperability for desk phones (connected to the corporate PBX or IP-PBX) and mobile device
- **Push-to-talk services:** Empower users with robust, instant communications - including the ability to call individuals or up to 255 definable groups
- **Personal Management Tools:** Access to corporate email, calendar, contacts and tasks keeps workers in touch and on top of their schedule
- **Text messaging:** Service within the wireless LAN coverage area ensures fast, efficient communications between workers
- **Internet/Intranet access:** Provides on-the-spot easy access to web-based applications and information as needed throughout the business day
- **Line of business applications:** Support for Windows Mobile® 6.1 simplifies mobile access to server-based business critical applications

TEAM VoWLAN - System Components

WSM - Wireless Services Manager. WSM is pre-installed on a networked attached Appliance and provides control over all voice services for the TEAM system. Supports up to 4500 users per Appliance.

NSM - Network Services Manager A Windows based server application, NSM provides centralised management, monitoring and provisioning of the TEAM integrated voice and data solution.

RLS - Radio Link Solution. RLS enables enterprises with existing two-way radio systems to extend their PTT communications to TEAM devices.
