Key Advanced Features of 3CX

A Remarkable Solution

The easy-to-use solution from Call4tel Nx96 leverages 3CX Phone System open-standards software PBX, enhancing and improving the user experience, the low level of maintenance, extreme reliability and environment friendly. The installation time is the lowest ever found on any PBX appliance.

Latest Features and Functionalities

Always a step ahead, this small appliance integrates some of the most extraordinary features, such as the WebRTC web meeting for up to 250 participants, softphone clients for almost any operating system, QR scanning for instant provision of smartphones, automatic maintenance and faults notifications, web based management console and soft client to operate the PBX from anywhere in the world.

Virtually the Safest PBX on the Planet

Tunnel connections are assuring the safest path is always secured. With an A+ rating from SSL Labs, our PBX has the latest antihacking methods detection module and automatically shared worldwide blacklisted IP addresses, so that you are protected no matter what.

Always On and Running

Easily setup a backup and restore schedule using the local disk, any FTP server or even a ordinary Google Drive account. The built-in failover lets you replicate the PBX in another location and in as low as 5 minutes your phones will connect back to the secondary PBX, allowing you to continue running your business while the PBX gets troubleshooted and fixed.

Connect From Anywhere

Using the remote extensions or simply by accessing the web-based client your employees can now connect to the PBX from virtually anywhere in the world, whether in an airport terminal or a home office. They will have access to the complete range of features that a local office worker has, practically feeling as being in the office. All features will be available, such as corporate chat, video calling, conferences, status updates, call queues and many more.
