Federal Communications Commission (FCC) Statement

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna
- Increase the separation between the equipment and receiver
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected
- Consult the dealer or an experienced radio/TV technician for help

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

European Community (CE) Electromagnetic Compatibility Directive

This information technology equipment complies with the requirements of the Council Directive 89/336/EEC on the Approximation of the laws of the Member States relating to Electromagnetic Compatibility and 73/23/EEC for electrical equipment used within certain voltage limits and the Amendment Directive 93/68/EEC. For the evaluation of the compliance with these Directives, the following standards were applied:

RFI Emission:
- Limit according to EN 55022:2010 AS/NZS CISPR 22:2009, Class A
- Limitation of voltage fluctuation and flicker in low-voltage supply system according to EN 61000-3-3:2008

Immunity:
- Product family standard according to EN 55024:2010
- Electrostatic Discharge according to IEC 61000-4-2:2008
- Radio-frequency electromagnetic field according to IEC 61000-4-3:2006+A1:2007+A2:2010
- Electrical fast transient/burst according to IEC 61000-4-4:2010
- Surge immunity test according to IEC 61000-4-5:2005
- Immunity to conducted disturbances, Induced by radio-frequency fields: IEC 61000-4-6:2008
- Power frequency magnetic field immunity test according to IEC 61000-4-8:2009
- Voltage dips, short interruptions and voltage variations immunity test
Australian RCM Compliance.

This equipment is compliant with the required Australian RCM standards.

Please read the following safety information carefully before installing the switch:

**Warning:** Installation and removal of the unit must be carried out by qualified personnel only.

- This guide is intended for use by network administrators who are responsible for setting up and installing network equipment; consequently it assumes a basic working knowledge of LANs (Local Area Networks).

- The unit must be connected to an earthed (grounded) outlet to comply with international safety standards.

- Do not connect unit to an A.C outlet (power supply) without an earth (ground) connection.

- The appliance coupler (the connector to the unit and not the wall plug) must have a configuration for mating with an EN 60320/IEC 320 appliance inlet.

- The socket outlet must be near to the unit and easily accessible. You can only remove power from the unit by disconnecting the power cord from the outlet.

- This unit operates under SELV (Safety Extra Low Voltage) conditions according to IEC 60950. The conditions are only maintained if the equipment to which it is connected also operates under SELV conditions.
SAFETY PRECAUTIONS
Read the following information carefully before operating the device. Please follow the following precaution items to protect the device from risks and damage caused by fire and electric power:

- Use the power adapter that is included with the device package.

- Pay attention to the power load of the outlet or prolonged lines. An overburdened power outlet or damaged cords and plugs may cause electric shock or fire. Check the power cords regularly, if you find any damage, replace it at once.

- Proper space for heat dissipation is necessary to avoid any damage caused by device overheating. The ventilation holes on the device are designed for heat dissipation to ensure that the device works normally. Do not cover these ventilation holes.

- Do not put this device close to a place where a heat source exits or high temperature occurs. Avoid placing the device in direct sunshine.

- Do not put this device close to a place which is damp or wet. Do not spill any fluid on this device.

- Please follow the instructions in the user manual/quick install guide carefully to connect the device to your PC or other electronic product. Any invalid connection may cause a power or fire risk.

Do not place this device on an unstable surface or support.
1. AS1000 Series Product Introduction

The AS1000 series are unmanaged low cost Gigabit Ethernet Power Over Ethernet switches. Two models are available and consist of 8x 10/100/1000Mbps PoE+ Ports and 24x 10/100/1000Mbps PoE+ ports plus 2x 1000Mb SFP Ports. All copper ports are auto sensing, auto MDI/X ports allowing easy connectivity to your existing switching infrastructure and your PD PoE devices, such as IP Phones, Wireless Access Points and IP Video Cameras. All ports support up to 30W of power, with the 8 port switch supporting 18.75W per port and the 24 Port switch supporting 10.4W per port at full load. The AS1008-P supports up to 150W and the AS1026-P supports up to 250W in total.

With support for IEEE 802.3az Energy Efficient Ethernet (EEE) the switch can reduce power consumption by detecting the length of the cable and the operating load of the switch and automatically adjust the signal intensity, reducing energy consumption and helping reduce carbon emissions.

The AS1000 Series is the ideal solution for adding low cost Gigabit PoE capability to your newly deployed IP PBX and IP Phone infrastructure.

Features

- Supports PoE power up to 30W for each PoE port
- AS1008-P supports PoE power up to 150W for all PoE ports
- AS1026-P supports PoE power up to 250W for all PoE ports
- Supports PoE IEEE802.3at/af compliant PDs
- Supports IEEE802.3x flow control for Full-duplex Mode and backpressure for Half-duplex Mode
- Supports IEEE802.3az energy efficient Ethernet (EEE),
- AS1008-P - 2K MAC address with auto-learning and auto-aging
- AS1026-P - 8K MAC address with auto-learning and auto-aging
- LED indicators for monitoring power, link, activity and speed
- AS1026-P supports 2x SFP Ports for fibre up links to your existing switching infrastructure
2. **AS2000 Series Product Introduction**

The AS2000 series are unmanaged low cost Fast Ethernet Power Over Ethernet switches. Two models are available and consist of 8x 10/100Mbps PoE+ Ports and 24x 10/100Mbps PoE+ ports. All copper ports are auto sensing, auto MDI/X ports allowing easy connectivity to your existing switching infrastructure and your PD PoE devices, such as IP Phones, Wireless Access Points and IP Video Cameras. All ports support up to 30W of power, with the 8 port switch supporting 18.75W per port and the 24 Port switch supporting 10.4W per port at full load. The AS2008-P supports up to 150W and the AS2024-P supports up to 250W in total.

With support for IEEE 802.3az Energy Efficient Ethernet (EEE) the switch can reduce power consumption by detecting the length of the cable and the operating load of the switch and automatically adjust the signal intensity, reducing energy consumption and helping reduce carbon emissions.

The AS2000 Series is the ideal solution for adding low cost Fast Ethernet PoE capability to your newly deployed IP PBX and IP Phone infrastructure.

**Features**

- Supports PoE power up to 30W for each PoE port
- AS2008-P supports PoE power up to 150W for all PoE ports
- AS2024-P supports PoE power up to 250W for all PoE ports
- Supports PoE IEEE802.3at/af compliant PDs
- Supports IEEE802.3x flow control for Full-duplex Mode and backpressure for Half-duplex Mode
- Supports IEEE802.3az energy efficient Ethernet (EEE),
- AS2008-P - 2K MAC address with auto-learning and auto-aging
- AS2024-P - 8K MAC address with auto-learning and auto-aging
- LED indicators for monitoring power, link, activity and speed

3. **Checklist**

Before you start installing your equipment, verify that the package contains the following:

- The AS1008-P / AS1026-P / AS2008-P / AS2024-P – POE Switch
- Rack Mount kit with appropriate mounting screws
- Power Cable
- Warranty Card

Please notify your supplier immediately if any of the aforementioned items are missing or damaged.
4. Installation

4.1 Installation Method

The site where you install the switch may greatly affect its performance. When installing, please take the following into consideration.

- Install the switch in a cool, dry place. See technical specifications for the acceptable temperature and humidity operating ranges.
- Install the switch on a secure, level surface that can support its weight, at least 5Kg.
- Leave at least 10cm of space at the front and rear of the switch to ensure adequate ventilation.

4.2 Desktop or Shelf Installation

When installing the switch on a shelf or desktop please ensure guidelines above are followed, including level surface and adequate ventilation.

![Desktop installation](image)

Fig. 1 Desktop installation

4.3 Rack Installation

All AS1000 and AS2000 switches are rack mountable and can be installed in an EIA-19 based equipment rack. First install the provided rack mount brackets onto each side of the switch using the screws provided. Using the screws provided with your rack mount the switch into your equipment rack.
Fig. 2 Rack Mount kit installation
5. Powering on the Switch
Connect the female connector of the power cord here, and the male connector to the AC power outlet. Make sure the voltage of the power supply meets the requirement of the input voltage.

Fig. 4 Rear of the Switch

Fig. 5.1 Front panel of the AS1026-P
7. Network Connection

These switches are designed to be connected to (AS1000 Series - 10, 100 or 1000Mbps) or (AS2000 Series - 10 or 100Mbps) network cards in PCs and Servers, as well as to other switches and hubs.

Cabling Guidelines
The RJ-45 ports on the switch support automatic MDI/MDI-X pinout configuration, so you can use standard straight-through twisted-pair cables to connect to any other network device (PCs, servers, switches, routers, or hubs).

Each device requires an unshielded twisted-pair (UTP) cable with RJ-45 connectors at both ends. Use Category 5 or better for 100BASE-TX connections, and Category 3 or better for 10BASE-T connections.

Connecting To Pcs, Servers, Hubs and Switches
1. Attach one end of a twisted-pair cable segment to the device's RJ-45 connector.

2. Attach the other end of the cable segment to an available port on the switch.

   Make sure each twisted pair cable does not exceed 100 meters (328 ft) in length.

3. As each connection is made, the relevant port LED (on the switch) corresponding to each port will turn on green to indicate that the connection is valid.

Appendix A. Troubleshooting

Diagnosing Switch Indicators

The Power Led Is Off
- Make sure the AC power cord is connected to the switch and power source properly.
- Make sure the power source is ON.

The Link/Act Led Is Off When a Device Is Connected To the Corresponding Port
- Make sure that the cable connectors are firmly plugged into the switch and the device.
- Make sure the connected device is turned on and working properly.
- The cable must be less than 100 meters long (328 feet).
- Check the port on the attached device and cable connections for possible defects. Replace the defective cable if necessary.

Power and Cooling Problems
If the power indicator does not turn on when the power cord is plugged in, you may have a problem with the power outlet, power cord, or internal power supply. However, if the unit powers off after running for a while, check for loose power connections, power losses or surges at the power outlet. If you still cannot isolate the problem, the internal power supply may be defective.
