**Overview**

The Boxer series BMS-836 is a 8-port high speed Serial device server. It is designed to translate data between the serial and Ethernet formats, allowing users to access, manage and configure remote facilities or equipments over the Internet from any location. BMS-836 provides quick, reliable and seamless integration of existing RS-232 devices to an Ethernet network. The unique hardware and software design of BMS-836 enables you to connect RS-232 serial devices to Ethernet network at a minimal transition cost. It is equipped with versatile operation modes which provides a transparent data channel between serial device and the TCP/IP network, so that the serial device can be accessed through standard TCP/IP protocols. The BMS-836 can function as a TCP server, a TCP client or an UDP node and can re-establish the TCP connection every 5 seconds in case a network malfunction occurs, to keep the device stay connected as soon as possible.
