

### Datasheet

# VidyoGateway™

### Flexible and affordable interoperability

Available in both physical and virtual appliance form factors, VidyoGateway<sup>™</sup> extends the Vidyo infrastructure to support third-party video and audio endpoints. For H.323 and SIP-based systems, VidyoGateway delivers participant video at resolutions up to 1080p30, plus user-friendly features like far-end camera control, content sharing, and interactive voice response. VidyoGateway also integrates with enterprise IP PBX systems for seamless audio-only participation. Unlike hosted bridging services that discourage adoption with per-user and per-minute fees, VidyoGateway lets people collaborate freely, without the threat of balloon payments or unplanned expenses. With support for clustering and high-availability, VidyoGateway delivers affordable interoperability that is easy to deploy, manage, and scale.

## Key Features

#### **Intuitive User Experience**

- Connect and control third party H.323 and SIP endpoints and cameras
- Share content between H.323, SIP and Vidyo endpoints using H.239 and BFCP
- Customizable Interactive Voice Response (IVR), participant join/leave and recording indicators

#### **Flexible Deployment**

- Provides packet-loss error resiliency over the Internet through VidyoRouter<sup>™</sup> – no external QoS required when co-located with third party endpoints
- Clustering and high availability deployment options enhance capacity and resiliency
- Connects to both MCUs and endpoints
  with automatic rate and resolution matching

#### Ease of Management

- Simplify administration, configuration and maintenance with web-based interface
- Centrally create reusable profiles to simplify call configuration and setup
- Leverage built-in security management: SSL certificates, private key management, NAT and firewall traversal, and HTTPS all FIPS 140-2 compliant

#### VidyoGateway Virtual Edition (VE)

- Same performance and capacity as the VidyoGateway XL appliance
- Easy to deploy, manage, and scale
- Automatically sizes capacity to allocated VM resources
