**Topic / Issue:** Setting extension to use a particular account

---

**Written By:** Phuc Nguyen

---

If you have more than one ITSP account set on your PBX and want a range of extensions to only be allowed to use that account. You can have set a call routing pattern to only allow the extensions set use that particular account.

In your Call Routing Table,

Have tick box;

Filter on Caller / Call Type / Modify Caller ID

And;

**Inbound Call Type - Edit Entry**

**Inbound Caller Pattern:**

{31,32,33}

(wildcard supported)

**Inbound Number of Discarded Symbols:**

**Inbound Prefix:**

**Inbound Call Type:**

Any

By having extension 31, 32, 33 set, only these extensions can call out using that call route.

Have CR entry modified in highest priority (top of CRT).
