

### 4/8/16/32 Port Serial Adapters

Alloy's MPS series of multiport serial cards are suited for high density serial applications. Typically they are used for Point of Sale systems, Data Acquisition, Industrial Control or Serial Printing applications. The cards offer RS-232 speeds of upto 230.4Kbps, simple installation and diagnostics utilities and support for most common operating systems.

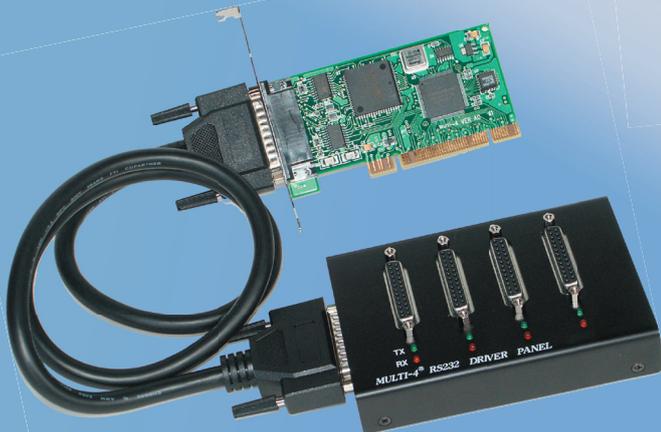

Alloy's MPS series of multiport serial cards are designed for use in PCI Based systems and are compliant to PCI 2.2 specification supporting dual voltage 3.3/5V PCI slots. They offer various asynchronous RS-232 options from a fixed 4 port card to an Expandable 32 port system which uses modular panels for connectivity. Connectivity options include an Octopus type cable or port module panels, both in DB-25 connection as standard. The Expandable MPS-32 system supports port module panels in 8,16, or 32 port RS-232 versions and can be expanded by simply plugging them end on end to a maximum of 32 ports per MPS-32 controller. Diagnostic RX / TX leds and surge protection are provided on the panel modules. Note: Call Alloy sales team for additional connector types and RS-422/485 options.

### KEY FEATURES

- ✓ MPS-32 Expandable cards supports from 8 to 32 serial ports.
- ✓ MPS4/8 support 4 and 8 fixed serial ports.
- ✓ Surge Protection build into Panel units.
- ✓ Diagnostic RX / TX leds on Panel units.
- ✓ DB-25 termination on all cards
- ✓ PCI 2.2 compliant (Dual voltage)

MPS32 controller with MPP16-232 and MPP8-232 panel

MPS4-P-232

MPS4-P-232	4x DB25 Female	Panel
MPS8-P-232	4x DB25 Female	Panel
MPS8-C-232	4x DB25 Male	Octopus Cable
<b>MPS32</b>	MAX 32 via MPP Panels	Panel
<b>MPP8-232</b>	8x DB25 FEMALE	Expansion Panel
<b>MPP16-232</b>	16x DB25 FEMALE	Expansion Panel
<b>MPP32-232</b>	32x DB25 FEMALE	Expansion Panel
