1 Introduction

This Release Note describes hardware and software requirements to use with the

QX2000 software 6.1.10 Date: October 30, 2015

Additional enhancements, bug fixes and known issues incorporated in this software will be listed as known.

Date: October 30, 2015

2 Requirements

2.1 Hardware Requirements

- The software (SW) can be used on all QX2000 models.
- The model name is written on the back plate of the unit and the model number is on the bottom label.

2.2 Software Requirements

Attention: The software upgrade can be made from 6.0.1 or later software. If the QX2000 is running on a SW version lower than 6.0.1 then 6.0.1 needs to be installed from scratch. For details on the installation procedure, see Upgrading Instructions section.

2.3 Supported IP Phones

Listed below are the Epygi Supported IP phones with the corresponding firmware (FW) versions that are tested and recommended for use with QX2000 SW 6.1.10. All the phones in this list can be automatically configured to work with QX2000 SW 6.1.10.

Please Note: For most IP phones the QX2000 supports both the Plug-and-Play (PnP) and the auto configuration options. For some specific phones only the auto configuration option is supported. The configuration options for each specific IP phone is described in detail in Configuring Epygi Supported IP Phones document.

Please Note: Any known issues and limitations regarding the usage of the QX2000 SW 6.1.10 telephony services and features for each IP phone is described in detail in the QX IP PBX Features on Epygi Supported IP Phones List document.

Both mentioned documents are available at www.epygi.com and can be found under the Support Portal.

Please Note: QX2000 IP phones firmware control mechanism will not upgrade snom FW version from 6.x to 7.x. This should be done manually via snom web site. Once the snom FW version is 7.x, the QX's FW control will automatically upgrade/downgrade the phone to Epygi's recommended FW version but not to 6.x.

Please Note: In the model's list the Polycom phones with (*) sign are also presented as Polycom-xx-Pre-3.3.0 due to backward incompatibility of UC Software 3.1.1 configuration. It is recommended to use Pre-3.3.0 models with Application SIP software 3.2.2.0477.

Edition 1 4 30-Oct-15

2.4 Interaction with Other Epygi Software Releases

- QXISDN4, QXE1T1 or QXFXO4 gateways used in the shared mode should have SW 6.1.5 or higher to achieve maximum feature functionality with the QX2000 SW 6.1.10.
- QXFXS24 should have SW 6.1.5 or higher for PnP configuration to achieve maximum feature functionality with the QX2000 SW 6.1.10.
- ActiveX Control SW 5.7.0 or higher should be used with 3PCC functions with the QX2000 SW 6.1.10.
- Auto Dialer SW 1.0.11 or higher should be used with the QX2000 SW 6.1.10.
- Desktop Communication Console (DCC) SW 1.13 or higher should be used with the QX2000 SW 6.1.10.
- QX-Quadro Configuration Console (QCC) SW 2.1 or higher should be used with the QX2000 SW 6.1.10.
- HotCall Add-In SW 2.3 or higher should be used with the QX2000 SW 6.1.10.
- HotKeyCall SW 1.10 or higher should be used with the QX2000 SW 6.1.10.
- To use QX2000 SW 6.1.10 with a 3PCC or Click2Dial application the 3pcc/Click2Dial Access
 Allowed checkbox should be enabled for each extension(s) using this feature.
- Epygi Media Streamer (EMS) SW 2.4 or higher should be used with the QX2000 SW 6.1.10.
- Epygi Hotel Console (EHC) SW 1.0.7 or higher should be used with the QX2000 SW 6.1.10.

Important Note: QX2000 SW 6.1.2 and higher is not compatible with ACD Service and Statistics Monitoring and Reporting (SMR) system. The replacement for SMR is the Epygi ACD Console (EAC) web application. EAC requires a software license key.

Edition 1 5 30-Oct-15

3 New Features History

The table below indicates a high-level list of new features that have been added beginning with the most recent QX2000 SW release.

Release	New Features
	Added auto configuration support for the new Yealink SIP-T19P E2, T21P E2, T23G(P) and T27P IP phones.
	Added OpenVPN support, which allows secure point-to-point or site-to-site
	connections in routed or bridged configurations between the QX50/QX200 and other
	devices and remote access facilities. Added support for the new Epygi Hotel Console (EHC) application (with a license
	key).
	Added new Alarm feature. This feature allows to be schedule alarms for each
6110	extension. The configured alarm will be automatically activated at the scheduled time.
6.1.10	Added support for Barge-In, Whisper and Listen-In features from EAC web GUI.
	Added Reporting feature in the EAC application that allows reports to be generated
	and downloaded in a CSV format related to the ACD statistics and CDR records.
	Added support for direct outbound/inbound calls from/to agents along with the ACD
	call statistics and CDR records for these calls. Added a new ACD Service in the Firewall→Management Access to allow remote
	access to the EAC application from the WAN.
	Added a new EHC Service in the Firewall→Management Access to allow remote
	access to the EHC application from the WAN.
	Added auto configuration support for the new Alcatel Temporis IP100, IP150, IP300,
6.1.5	IP700G IP phones and Alcatel IP2015 DECT phone.
	Added PnP and auto configuration support for the new snom D715/715 and D725 IP phones.
	Added support for the new Epygi ACD Console web application (with a license key),
	which allows call center agents, supervisors and administrators to monitor the
	queues and agents, to view call statistics, to chat and to update the agents' status,
	etc. EAC stores and formats the data and produces real-time information and
	statistical reports on ACD activities.
	Added Phone Book support, which allows external contacts to be easily added into the IP Phones' Directory.
	Added a new Recording tool, which allows system voice messages to be directly
	recorded from an IP phone.
6.1.2	Added auto configuration support for the new Fanvil X3/X3P, X5/X5G, C400 and
	C600 IP Phones.
	Added PnP and auto configuration support for the new snom M700 Base Station. Added Play Ringback Tone option in Find Me/Follow Me (FM/FM), which allows a
	ringback to be played during the Welcome Message Delay and Audio Wait period.
	Added a new configuration option in the IP Phone templates to allow the Record
	button functionality for snom phones to be enabled/disabled.
	Added the Live Dialpad option for Yealink phones in IP Phone templates.
	Added Caller ID Source parameter for Yealink phones in IP Phone templates.
	Added BLF LED Mode states to be optioned for Yealink phones (except Yealink SIP-
608	T19P) in IP Phone templates.
6.0.8	Added an additional option to verify the status for trial and time limited features keys.

Edition 1 6 30-Oct-15

Release	New Features
	Added PnP and auto configuration support for the new Mitel (Aastra) 6863i, 6865i, 6867i IP Phones.
6.0.7	Added PnP support for Cisco SPA IP phones: 303, 501, 509 and 525.
	Added programmable keys configuration support for Cisco SPA IP phones: 303, 501, 509 and 525.
6.0.6	
	PnP and auto configuration support for new Yealink SIP-T48G phone.
6.0.5	Expansion module EXP39 support for Yealink SIP-T26P, SIP-T28P and SIP-T38P phones.
6.0.2	

4 Changed Features History

The table below provides a high-level list of changed features that have been changed beginning with the most recent QX2000 SW release.

Release	Changed Features
	The maximum count for IP Phones trial feature has been changed from 99 to 1800.
	Added support in Extensions Multiple Editing for the following fields: Call Barge-In
	/ Intercept Access List from General Settings page.
	The behavior for the VoIP Carrier Wizard is changed. The new Authentication by IP
	Address checkbox allows bypassing the Account Name and Password information
	and filling the SIP Server and SIP Server Port information only for the carriers not
	requiring account authentication.
	Added BINARY NETWORKS as a new carrier to the VoIP Carrier Wizard list.
	Added Blueface Ireland, Blueface Italy and Blueface UK as new carriers to the
6.1.10	VoIP Carrier Wizard list.
	Added IP Directions as a new carrier to the VoIP Carrier Wizard list.
	Added MyNetFone as a new carrier to the VoIP Carrier Wizard list.
	Added ThinkTel Communications as a new carrier to the VoIP Carrier Wizard list.
	Kebu.it carrier has been removed from the VoIP Carrier Wizard list.
	Consultative call transfer action has been removed from EAC→Dashboard page.
	The old password will not be required to insert when you change Phone Access
	Password for Administrator.
	The LAN IP address of the restored configuration file will be displayed in the shell
	window, while restoring previously backed up configuration file.
	In addition to expiration period the expiration date/time has been displayed for time-
	limited license keys in Licensed features table.
	Added support in Extensions Multiple Editing for the following fields: Password and
6.1.5	Confirm password from General Settings page and Authentication User Name
	from SIP Advanced settings.
	No Answer Call Forwarding (NACF) enhancement for FM/FM. Unanswered FM/FM
	call will be forwarded to NACF destination's Voice Mailbox.

Edition 1 7 30-Oct-15

Release	Changed Features
6.1.2	The ACD system has been completely redesigned for QX2000 SW 6.1.2. The SMR system isn't compatible with QX2000 SW 6.1.2 and higher software. The replacement for SMR is the new Epygi ACD Console web application. EAC requires a software license key. Please Note: In general, most of the ACD configuration settings will remain while updating to SW 6.1.2 and higher. The ACD settings should be reviewed before and after the update as new fields will be added in SW 6.1.2. If an ACD Agent rejects a call by pressing the Reject button on the phone, then that call will not ring the agent's phone again within the Queue Ring timeout duration. When an ACD Agent receives a call and doesn't answer within the Agent Ring timeout, the agent state will change to Away. Either the Agent or the Supervisor will need to change the agent's status back to Online. Added Ring Duration option for each FM/FM destination. The Ring Duration is used to select the ringing timeout of the destination. Loadlogo.cgi hidden page (for updating company details) has been renamed/changed to uploadlogo.cgi Recommended firmware versions for Grandstream GXP 1400, 1405, 1450, 2100, 2110, 2120, 2124 have been changed from 1.0.4.9 to 1.0.6.7. Recommended firmware versions for snom 710, 720, 760 have been changed from 8.7.3.15 to 8.7.3.25.9.
	Recommended firmware versions for Aastra 6757iCT, 9480iCT have been changed from 2.6.0.2019-SIP to 3.3.1.2256-SIP. Recommended firmware versions for Mitel (Aastra) 6730i, 6731i, 6753i, 6755i, 6757i, 9143i, 9480i have been changed from 2.6.0.2019-SIP to 3.3.1.4305-SIP. Recommended firmware version for Mitel (Aastra) 6739, has been changed from 3.2.2.2088-SIP to 3.3.1.4305-SIP.
6.0.8	Recommended firmware versions for Mitel (Aastra) 6735i, 6737i have been changed from 3.2.2.7137-SIP to 3.3.1.8140-SIP.
6.0.7	Aastra IP phones (6730i, 6731i, 6735i, 6737i, 6739i, 6753i, 6755i, 6757i, 6863i, 6865i, 6867i, 9143i, 9480i) have been renamed to Mitel (Aastra) 6730i, 6731i, 6735i, 6737i, 6739i, 6753i, 6755i, 6757i, 6863i, 6865i, 6867i, 9143i and 9480i. Polycom KIRK Wireless Server 300, KIRK Wireless Server 6000 stations have been renamed to Spectralink KIRK Wireless Server 300 and Spectralink KIRK Wireless Server 6000 accordingly. Please Note: QX2000 doesn't support the KWS's redundancy feature for these stations. The max number of Line appearance for SPA525G2 is changed from 2 to 10. New parameters have been added to Aastra IP phones templates. Recommended firmware versions for Grandstream GXP2130, GXP2140 and GXP2160 have been changed from 1.0.2.9 to 1.0.3.9. Changed the behavior for Polycom phone display in case of incoming calls to watched extensions. Show or not the call appearance/caller's ID on incoming calls to watched extensions is configurable now in the IP phones templates.

5 Fixed Issues

Issues fixed since version 6.1.5:

T: Title

D: Description

T:	The Shared Voice Mailbox BLF key doesn't work properly on Cisco SPA
	phones
ρ.	When you press Shared Voice Mailbox key, the IP phone send *85 only and
D:	you need to enter extension number.
T:	SIP IDS functionality issue
	The IP address must be blocked and added into Firewall's Blocked IP List
D:	after 10 continuous failed attempts of SIP Registration, but is blocked and
	added only after 11 attempts.
T:	"Symmetric RTP" doesn't work properly on QX2000
D:	
T:	SRTP support on snom D715/715 and D725 has been temporarily
	disabled.
	Snom D715/715 and snom D725 forced to make only secure calls by default,
D:	even though QX2000's default SRTP settings for Extension is Make unsecure
	calls, accept anything and snom's default SRTP policy set to Optional.
T:	QX2000 with QXISDN GW share mode issue
	QX2000 is connected with QXISDN GW using share mode option. ISDN
D:	trunks mode couldn't be change from User to Network from QX2000's ISDN
	Trunk Settings page, using ISDN Wizard.

6 Known Issues

T: Title

D: DescriptionC: Consequences

Fix: How to avoid the situation, or what to do in case the situation has occurred

	1	
19167	T:	AudioCodes 310HD and 320HD IP phones are forced to make only secure
		calls by default, even though QX2000's default SRTP settings for attached
	D:	extension is "Make unsecure calls, accept anything"
	D: C:	The outgoing calls cannot be established.
	0.	Go to the Codec Settings for the extension attached to that phone, select
	Fix:	Make and accept only unsecure calls option in the Secure RTP Settings and
	1 1/	reset the phone to factory defaults. Will be fixed in the future releases.
	T:	Paging doesn't work for Parent/child extensions
	D:	r aging account work for r arong ornia extensions
18986	C:	
	Fix:	Will be fixed in the future releases.
	T:	Phone book isn't available on Yealink T4x phones at once
		After factory reset on Yealink T4x phones, phone book will not appear in phone
	D:	directory on the IP phones.
18959	C:	
		Workaround: The phone book will appear after making changes in Phone book
	Fix:	directory, example adding a new extension to Public Directory and rebooting
		phones. Will be fixed in the future releases.
	T:	It's not possible to park a call twice to the same call park extension by
	١.	using programmable key on Yealink T32G and T38G
		Upon successful call park/pickup the second attempt to park the call, using the
18839	D:	park ext. programmable key fails. The problem is happening only if we park the
10003		call to the same park extension (by pressing Call Park key).
	C:	
	Fix:	Workaround: Park the call to a different call park extension. Will be fixed in the
		future releases.
	T:	An issue with extension watching on Fanvil C62 phone
	D:	If a programmable key is configured to watch an extension you cannot pickup
18707		the call addressed to that extension by pressing the key.
	C:	
	Fix:	Will be fixed in the future releases.
	T:	When opening the Call History, sometimes it doesn't show CDR records
18638		but shows an empty page
	D:	Only after refreshing the page it shows the CDRs.
	C:	VACII la a fina ad in the a fint way valor and
	Fix:	Will be fixed in the future releases.
18591		GXP2200, GXV3175 and GXV3140 IP phones are forced to make secure
	T:	calls by default, even though in phone Web GUI the SRTP Mode is
	D.	configured as "Enabled but not forced"
	D: C:	The outgoing cells connect he catablished
	U.	The outgoing calls cannot be established.

Edition 1 10 30-Oct-15

	1	
		Go to the Codec Settings for the extension attached to that phone, select
	Fix:	Make and accept only unsecure calls option in the Secure RTP Settings and
		reset the phone to factory defaults. Will be fixed in the future releases.
		There is no audio when using service codes like *74,*75,*4 on Astra 6739i
	T:	IP phone in case if SRTP Policy is set as "Make and accept only secure
40550		calls" on the phone extension
18559	D:	
	C:	
	Fix:	Will be fixed in the future releases.
	1 1/\(\).	Could not dial out (*1) or use any other moderator feature while welcome
	T:	message file has been playing
		Could not dial out (*1) or use other moderator features while welcome message
18549	D:	file has been playing. You should listen to the whole welcome message file first,
		after that use moderator features. It is recommended to keep the welcome
		message to a short duration.
	C:	
	Fix:	Will be fixed in the future releases.
	T:	Part of conference recording is lost after recording pause/resume
	1	When pausing the conference recording and then resuming it again, the final
18548	D:	recording contains only the part after resuming.
10010	C:	receiving contains only the part atterness.
	Fix:	Will be fixed in the future releases.
	1 1/.	
	T:	In shared mode, E1/T1 trunk link is not available in Status→System
	_	Status→Lines page

	Fix:	future releases.
		After changing the Time/Date Settings manually, it takes you to the QX IP
	T:	PBX login page
10007	D.	PBA logili page
18397	D:	
	C:	
	Fix:	Will be fixed in the future releases.
		A problem with configuring programmable keys in IP line Advanced
	T:	Settings page for Grandstream GXP2124, GXP 2140 and GXP2160
		phones
		If the Programmable Keys configuration page for GXP2124, GXP2140 and
18372, 17709		GXP2160 phones has all six Line keys configured with some functions the
	D:	phones becomes nonfunctional: the dial tone is lost, the keys and buttons on
		phone keypad stop working.
	C:	process, pass otop workings
	<u> </u>	Do not use all six line kove when configuring programmable kove. Keep at least
		Do not use all six line keys when configuring programmable keys. Keep at least
	Fix:	two line keys unused to be able to make/receive calls. Or use Multi-Purpose
		Keys instead. Will be fixed in some future FW version for the mentioned
10:00	_	phones.
18186	T:	A fake error message when pressing successful calls tab in Call History

Edition 1 11 30-Oct-15

	D:	When pressing this tab just after a successful call termination, sometimes the following error is displayed: Log file seems to be corrupted. Please clear all records. Pressing the same tab again resolves the issue.
	C:	
	Fix:	Pressing this tab once more will resolve the problem. Will be fixed in the future releases.
	T:	Watching does not work properly configured on Akuvox SP-R53P phone
18112	D:	If a programmable key is configured to watch an extension, it allows only calling to that extension. You cannot pickup the call addressed to that extension by pressing that key.
	C:	
	Fix:	Will be fixed in the future releases.
	T:	
	1.	Using Call Intercept to directly answer an incoming ACD call fails
17555	D:	When ACD calls to an extension of an agent and Call Intercept is used from another extension to answer the call with the feature code (*94 + extension number), the caller hears nothing and the incoming call continues ringing. Hanging up the call from caller to direct pickup, leaves an active call.
	C:	
	Fix:	Will be fixed in the future releases.
	T:	Calls which are done using Call Relay (*2) on the auto attendant are not shown in Call History.
17404	D:	Only the call to attendant is shown in the call history. The call leg after call relay is missing in the call history in case if the external caller is terminating the call first.
	C:	
	Fix:	Use feature code *1 instead of *2 for call relay. Will be fixed in the future
	_	releases.
	T:	Find Me/Follow Me does not work for incoming Secure RTP call
16683	D:	Though the call came with SRTP option the FM/FM is making unsecure calls.
10000	C:	As a result the call is not established.
	Fix:	Will be fixed in the future releases.
	T:	Shared Mailbox watching does not work when using "Allow access to Shared Mailbox for enabled extensions" option in Many Extension Ringing configuration
16635	D:	Extension has Many Extension Ringing enabled with a few extensions configured for Shared Mailbox.
10000	C:	However, in the IP Line settings, the Shared VMail Ext. xxx option is not listed
	Fix:	in the drop down list for Advanced Programmable Keys Configuration. Use the Shared Mailbox: Edit Voice Mailbox Access List link in the Voice
		Mailbox Settings for extension. Will be fixed in the future releases.
16533	T:	A problem with incoming Secure RTP call in a specific scenario
	D:	When incoming Secure RTP call is connecting to the destination via Call Routing table, QX2000 always tries to connect it as an unsecure call and the call is being dropped due to the media parameters incompatibility.
	C:	
	Fix:	Will be fixed in the future releases.
1000=	T:	After changing QX2000 LAN IP configuration (IP address or subnet mask) IP phones lose registration and become unusable
16037	D:	
	C:	
	O.	1

Edition 1 12 30-Oct-15

	Fix:	After changing QX2000 LAN IP configuration first reboot the unit then reboot the IP phones. Will be fixed in the future releases.
	T:	It is not possible to pickup (via pickup group) the call to extension with Find Me/Follow Me enabled
15942	D:	
	C:	
	Fix:	Will be fixed in the next releases.
	T:	IP phone does not go back to the normally idle state automatically when the recording had been started via the Record button and the call was released
15729	D:	The Recording started message remains on the phone screen after one of the parties terminates the call by going on-hook.
	C:	Only incoming calls to IP phone are possible in this state.
	Fix:	Need to use Exit button to retrieve the IP phone functionality. Will be fixed in the future releases.
	T:	Call Interception does not work on Grandstream GXP2000 configured as a receptionist, when extensions are watched on expansion module
14797	D: C:	
14737	C:	
	Fix:	Use basic seven keys instead of expansion module. Will be fixed in the future releases.
	T:	An issue with configuring Aastra IP phones as local extensions for QX2000 IP PBX
13802	D:	After changing the QX2000's LAN IP address, the Aastra 480i, 9133i and 55i phones with 1.4.1.2000 firmware are not registering after restart.
	C:	
	Fix:	They must be factory reset to register again. Will be fixed in the future FW versions for Aastra phones.
10100	T:	Some of the voice mail services could be unavailable if external Voice Mail is in use for extension
	D:	In this scenario some of the features, for example ZeroOut and entering the VMS directly with option 1 will not work.
12190	C:	
	Fix:	This is normal, as those features are the QX2000's internal VMS system features. If external VMS system is used, user gets the features of that external system.

Edition 1 13 30-Oct-15

7 Upgrading Instructions

7.1 General Hints

Attention: It is recommended to backup the configuration for **emergency purposes** prior to upgrading the firmware. You can do that by clicking the **Download Configuration** link in the **Firmware Update** page. Regardless, the configuration of a system will remain after the firmware update. Moreover, voice mails, all custom messages, call history and system events will be saved during the upgrade.

The following steps describe how to correctly perform the firmware update:

- Save the current configuration by doing a Backup and Download of all current configuration and voice data (Maintenance-Backup/Restore-Backup and download current Configuration).
- Perform the Firmware Update using the Firmware Update page.

Please Note: If the saved configuration is restored all VMs and custom messages will be lost.

Please Note: The firmware upgrade to version 6.1.x using the Firmware Update page can only be done starting from 6.0.1 and higher versions. If the QX2000 is running on a software version lower than 6.0.x, then 6.0.1 needs to be installed manually from scratch before updating to 6.1.x.

The steps below describe shortly the QX2000 manual installation procedure used to install the software from scratch. This would be used to install version 6.0.1 or for Emergency Recovery of a system. This procedure will result in a system that is at factory default. Additional details are available on the Epygi Channel Portal in the document QX1000/2000 System Recovery Procedure:

- 1. Turn on the PC.
- 2. Insert CD/DVD disk including installation program to the DVD ROM.
- 3. Restart (reset) the PC.
- 4. Installation will start automatically after PC reboot. After the successful installation the PC will automatically shut down (this may take from 10-15 minutes).
- 5. The beep sound will indicate that the installation successfully completed.
- 6. Turn on the PC and quickly remove the installation CD/DVD disk from the DVD ROM.

7.2 Technical Advisory

Attention: For manually configured IP phones, it is now required to have the SIP Registration Timeout parameter set to 120 seconds or more on your IP phone. Values less than 120 seconds will not be accepted by the QX2000 and will cause the IP phone registration failure on the QX2000.

7.3 Limitations and Restrictions

- The memory used by Network Capture hidden page is limited to 12 MB. This will put a limitation on the duration of captured file.
- The capture duration is limited to 160 seconds in DSP Capture hidden page.
- The Call Capture duration is limited to 160 seconds.
- In case if voice mail recording codec is other than PCMU, the maximum length of VM sent by email is limited to three minutes.
- The number of VMs in the mailbox for one extension is limited to 500.
- Use Session Timer in IP Line Settings is deselected by default.
