1 Introduction

Epygi's products have provided cutting-edge solutions for customers since 2000. As the demand for new features and higher capacities grow, older hardware revisions of Epygi products will need to be upgraded or replaced.

The intent of this document is to define specific product life cycles and evolution paths of our portfolio. This will include the support commitments from a software perspective related to critical bug fixes and extended warranty programs. Details will include current product details, end of sale and discontinued product information.

2 Epygi's Responsibilities

In an effort to ensure Epygi products are offering the latest in demand features and to maintain our high level of reliability, hardware and software revisions are required. As part of our commitment to our customers, Epygi will continue to support older revisions for a period of time to resolve critical issues. Responsibilities of the manufacturer include the following actions:

- Notify all Epygi distribution partners of any product that has reached end of sale status.
- Provide details on the specific hardware revisions and the software supported on those systems.
- Continue to support end of sale products for a four (4) year period from the end of sale (EoS) last ship announcement date. Support includes:
 - Issue software patches for critical issues that interrupt call flow and call completion.
 - Maintain up-to-date documentation for the latest software release for the EoS product.
 - Update EoS product software if a critical issue is found in the recommended firmware version of supported IP Phones.
- Provide online technical support resources that include the following:
 - Latest software images and release notes.
 - Documentation and configuration guidelines.
 - Method for end users to register their device and to receive self-guided support.
 - Online method to request technical support assistance.
 - Online Technical Forum for users to seek answers and exchange ideas.
- Provide a Return Merchandise Authorization (RMA) process for products which are still covered under the Epygi Extended Warranty program.

NOTE: Epygi's responsibilities are subject to change without notice.

3 Channel Partners' Responsibilities

3.1 Distributors

Epygi's Channel Partners should continue to support installed products for the duration of the warranty period covering the end of sale products. Specific responsibilities include:

- Continue to fulfill any RMA responsibilities for the duration of the life cycle of all products.
- Offer standard support for all products until the conclusion of the warranty period, including the standard one (1) year standard warranty and any purchased extended warranty period.
- Guide certified resellers to access the Epygi Channel Portal for firmware, documentation and self-guided support.

3.2 Resellers

Epygi's Channel Partners should have the ability to sell, install and support the products in the field. Documentation, training and support are available to facilitate the success of the Channel Partner. Epygi has the following expectations of a certified reseller:

- Maintain an end user RMA process support consistent with Epygi's RMA procedures for the duration of the support life cycle of all products.
- Provide 1st level technical support to the end user, resolving 80% of the customer's issues until the conclusion of the warranty period, including the standard one (1) year standard warranty and any purchased extended warranty period.
- Guide end users to access the product registration page and to gain access to the Channel Portal for firmware, documentation and self-guided support.
