7 Upgrading Instructions

7.1 General hints

- It is recommended to execute the update by downloading the software first to a PC located in the LAN side of the unit and perform the firmware update from the LAN side. This is to make sure that arising problems with the Internet connection do not affect the upgrade process.
- Additionally it is recommended to make a backup of the configuration before upgrading and download this configuration to the PC used to manage the system.
- Remember that the following data is lost during an upgrade:
 - Call statistics
 - Transfer statistics for the network
 - o The event log
 - o DHCP leases
